INHIBITORY CHEMOKINE

MACROPHAGE
CELL-CELL TRANSMISSION

61. (Currently Amended) A method of inhibiting infection of a CD4+ cell by a macrophage-tropic HIV-1 which comprises contacting the CD4+ cell with a chemokine antagonist which ~~an agent, which agent~~
(a) binds to a CCR5 chemokine receptor on the surface of the CD4+ cell;
(b) blocks fusion of HIV-1_{JR-FL} with a PM-1 cell; and
(c) does not block fusion of HIV-1_{BRU} with such PM-1 cell; and
(d) does not activate an inflammatory response upon binding to the CCR5 chemokine receptor on the surface of the CD4+ cell;
in an amount and under conditions such that fusion of the macrophage-tropic HIV-1 to the CD4+ cell is inhibited, so as to thereby inhibit infection of the CD4+ cell by the macrophage-tropic HIV-1.
